## Smart tv app button

Nowadays, it's harder to buy a TV without smart features than one with prepackaged content. From Netflix and Hulu to web browsing and photo sharing features, web-connected TVs can do it all. But other than apps and widgets, what exactly makes a smart TV smart? We decided to weigh the issue. This guide covers exactly what you can expect to find in a smart TV, from apps to Alexa. What makes a TV smart? The great feature that separates smart TVs and not so smart TVs is an internet connection. Almost all smart TVs are equipped with both an Ethernet port and built-in Wi-Fi — some older models may require an adapter to enable Wi-Fi functionality — so they should be able to connect from anywhere in your house. Generally speaking, Wi-Fi should be fast enough for most purposes, but if you're planning on streaming games or 4K Ultra HD content, you might want to hardwire into your network instead. An internet connection is mainly used to stream TV shows and movies from a variety of apps and services, such as Netflix, Hulu, HBO and YouTube (among others). Sometimes there will be free stuff available (like on Crackle, Tubi TV, Pluto TV or Roku Channel for Roku TV), but for the most part you have to subscribe to these services to access their content. Many smart TVs also have browsers baked in — although these are usually unwieldy and frustrating to navigate — and some even have cameras for use with video conferencing apps. Everything about the A smart TV apps isn't very smart if it can't be used to access a variety of services, which is why almost all of them come with their own app store. Currently, Roku OS and Android TV lead the pack with the largest selection of apps. Roku, which refers to its apps as channels, has thousands to choose from. Most of these are content

focused, with lots of subcategories like sports, religion, philosophy, automotive and more. There's something for everyone. Android TV has these too, but in fewer quantities; it tends to have more games and tools. Samsung's Tizen and LG's WebOS platforms also have plenty of apps to choose from. A Rome, many roads Although all smart TVs are built with the same goal in mind – helping you access your favorite content without an intermediary (in this case, a set-top box or streaming stick) – they don't work the same way. In general, each manufacturer uses a different operating system with its own individual features and peculiarities, although some systems, such as Roku TV, are built into TV from several manufacturers. Below is a quick breakdown of the most common systems available. The Samsung Tizen Tizen is extremely fast, and it will automatically detect devices that you connect to the TV, marking inputs accordingly. Plus you can control some connected devices with the TV remote. LG WebOS WebOS is extremely simple and fun to and can support motion control with the included remote control, as well as Google Assistant. Sony Android TV If you are using an Android Android this should be immediately familiar. Sony Smart TVs support Google Cast, which allows you to project content from your phone (or tablet) onto your TV, and the Google Assistant. TCL Roku OS Like Roku streaming boxes, Roku OS is awesome, with easy navigation and best-in-class search that sees through each app for your selected content. There's even voice search. Toshiba Amazon Fire TV In addition to the introduction of the Amazon Video app, you get access to Alexa, a personal assistant that helps navigate your TV and control your smart home devices. Voice search For the most part, smart TV interfaces are designed to be simple and easy enough for anyone to use without training or tutorials (after all, lots of people check the display TV before buying). Yet sometimes you just don't want to hunt and peck – and that's where voice search comes in. As a fairly common feature of newer smart TV remotes, voice search turns navigation into an easy task with one click, no matter what you're looking for. But be aware that some platforms – like Roku – offer more robust search tools than others, and remote microphones aren't always good at understanding your voice, so patience is important. But what kind of commands can they handle? Here's a brief look: Play the latest episode of Lucifer on Netflix. Open Amazon Prime Video. Switch to HDMI 3. Mute the sound. Turn off after this episode of Friends. Some more accomplished models come with Amazon Alexa or Google Assistant built-in, which offers access to a much larger knowledge database. With the help of one of them, you will not only be able to tell the TV what to do, but also to search the Internet for answers to questions and scour through your connected accounts for contextual information, such as calendar events. If your TV doesn't come with a voice remote in the box, you may also be able to access voice search via a smartphone app, or by connecting an Amazon Echo or Google Home. User data privacy A good rule of thumb with all web-connected devices is that any user data you enter is always something at risk. Smart TVs are no exception. When you subscribe and purchase, we recommend that you keep your purchases within the TV app store. TV browsers are generally clunky tools that hackers can easily manipulate. If you need to buy deals outside of Amazon, banish the transaction to your home computer or phone. Options Not all smart TVs are created equal. Maybe the TV you like doesn't have the best operating system, or maybe you just don't have the money to pony up hundreds for a shiny new screen. If that sounds too true, set-top boxes and streaming sticks are great options that offer almost all the features of a high-end smart TV at an affordable price. Roku's products (such as Streaming Stick+) do a great job of turning existing stupid TVs into smart ones, as well as Google's Chromecasts and Amazon's Fire TV devices. Editors Smart TVs have improved at-home entertainment by making it there to watch streaming services, such as Netflix, Hulu and Amazon Prime, without the need for extra cables or devices. But if you don't want to upgrade your TV, you still have options to turn your existing TV into a smart TV. via amazon.comSmart TVs have improved home entertainment by allowing you to watch streaming services, such as Netflix, Hulu and Amazon Prime, without the need for extra cables or devices. But if you don't want to upgrade your TV, you still have options to turn your existing TV into a smart TV. Check out this advice on HD TV wiring. Here's how to turn your TV into a smart TV: Make sure your TV has an HDMI portThe first thing you want to check is that your TV has an HDMI port. You need this port to connect a smart media player. If your TV doesn't have an HDMI port, you can buy an HDMI-to-RCA adapter that connects to the red, yellow, and white cables located on the back of your TV.via amazon.comPlus, here are some things you should never do to your flat screen TV. How to turn your TV into a Smart TV: Buy a Smart Media PlayerYou have a lot of options for smart media players, including smart boxes like Apple TV, Amazon Fire Cube, streaming sticks like Roku Streaming Stick or Amazon Fire Stick and ultra-portable media players like Google Chromecast, among others. Here's how to hang a flat-screen TV. Here's how to turn your TV into a Smart TV option 1: Install your smart boxTo install the Apple TV box, connect one end of the HDMI cable to the box and the other to an HDMI port on the back of your TV. Be sure to note which HDMI slot on the TV you were using (slot one, two, three, etc.) Then plug the two-cylinder end of the cable connector into the back of the apple TV box and the other end of an electrical outlet. Now turn on your TV, change the TV input to the HDMI number that matches the location you selected. You should now see a settings display for the box. From there, you can follow the screen's instructions to complete the process. For Amazon Cube, the process is relatively similar. You plug HDMI and power cables into Fire Cube, press fast forward on the remote control, select your WiFi network, enter your password, and click connect, then sign in, or create an Amazon account. Buy Apple TV now on Amazon.How to turn your TV into a Smart TV Option 2: Install your Streaming StickIf you choose Amazon Fire Stick, simply plug the stick yourself directly into the HDMI port of your TV. Next, mount the power cable by plugging the USB cable into the brick power adapter, then unfolding the plug from the brick. Now, plug the end of the cable into the port on the side of the stick, and the other end of the cable into an electrical outlet. Finally, change the TV's input to hdmi channel that matches the tray you used on the back of your TV. You will then be prompted to press the Play/Pause button on the remote control, which pairs the remote control with your Fire Stick /TV. Next, select a wireless network and enter When this is done, prompted to sign in to your Amazon account. You can then start using the streaming stick to turn your TV into a smart TV. Buy Fire Stick TV now on Amazon.Broken TV remote? Here's how to repair it. How to turn your TV into a Smart TV option 3: Installing a portable media player in portable media is sticks in your thumb that look a lot like USB pen devices. Google's Chromecast is an option. To use it, you want to plug the cable on to the Chromecast directly into one of the HDMI ports on the back of the TV. Now attach the USB power cable and plug one end into your Chromecast and the other into a USB port on your TV. Turn on your TV, select the appropriate HDMI number, and wait for the chromecast settings screen to appear. You'll then be prompted to download the Google app on your smartphone. After downloading, opening the app, tap the Devices icon, wait for chromecast to detect your phone (be aware that for an iPhone, you'll first need to tap Use without Bluetooth, and then tap Skip Setup before you get to the Google Home app home page). You'll then be prompted with setup instructions to follow to start using your TV as a smart TV. Poor TV reception? Here's a fix. Buy Google Chromecast now on Amazon. Amazon.
